Wave sky

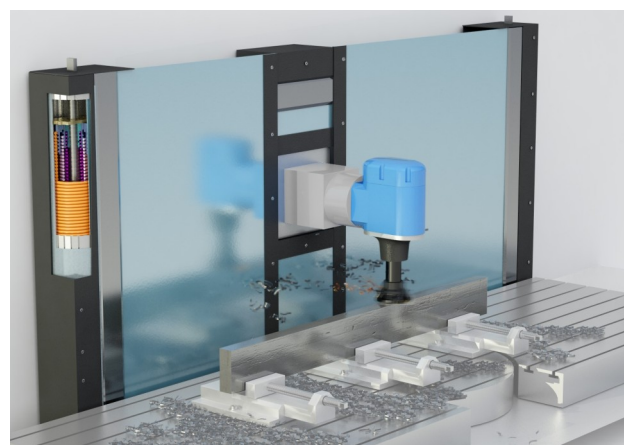

Wave Sky is a total covering for moving crosshead machines that withholds chips, fumes, oil and coolant splashes in machine tools during machining.

PEI's Wave Sky solves the following problems: it facilitates the extraction of dangerous fumes and vapors and prevents pollutants from escaping. This product also offers advantages to the machine manufacturer in terms of ergonomics and economy of use: for example, without the cover any dust extraction would require a system with much greater power and a massive air flow.

JH winding cover

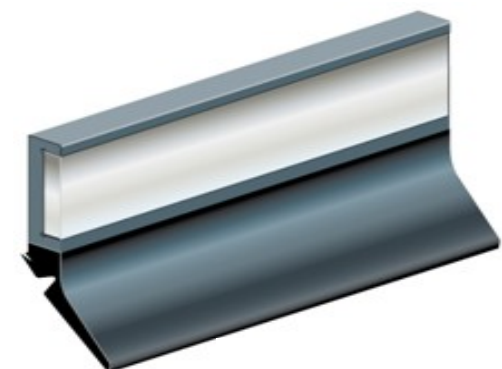

The JH aluminium winding cover is PEI Srl's effective response to ensure the safety of operators working on very large machine tools.

Ceramix

Presented at BIMU 2010, this powerful low-cost innovation is proposed again even at EMO 2011. Ceramix, a protective cover for all types of machining, unique on the world market for its innovative features. Ceramix combines lightness, flexibility and ease of installation.

Ceramix, the new protective cover that combines lightness, flexibility and ease of installation.

Bi-plastic scrapers

Expanded product range. In 2011 there are four models in stock.
